

Shears for plastic pipes 424

ICMA[®]
ST.424.03.22.EN

/ Description

Shears for plastic pipes up to Ø42mm.

/ Codes and specifications

Code	Specifications	Qty/pack
81424GH20	For pipes up to Ø42mm.	1

/ Instructions for use

1. Release the safety hook at the bottom part of the shears;
2. Press the release button with your thumb (picture 1);
3. Insert the pipe with a diameter less than 42mm, then press repeatedly the handles of the shears until the pipe is cut (picture 2);
4. After cutting, clean the blade with rustproof oil;
5. Completely close the shears for the next use (picture 3).

/ Warnings

When using shears at temperatures below 0°C, make sure to place the pipe in warm water before cutting, to avoid pipe breakage due to its fragility at low temperatures. If the edge of the blade appears worn during cutting, replace it by loosening the fixing screws and purchasing the same type of pipe blade. The product can be used for cutting rigid plastic pipes or aluminum plastic pipes.

/ Blade replacement

When the blade loses its cutting ability, remove the fixing screws (Picture 4) and replace the blade with a new one of the same type.
